BGFR is a protein-tyrosine kinase receptor (PTKR). The specification describes a method for identifying genetically modified mammalian cells. The method uses a mutated PTKR nucleic acid which comprises a modification to the intracellular and extracellular domains, or comprises a modification to the intracellular and extracellular domains and excludes any nerve growth factor receptor(s) (NGFR). The method uses mutated PTKR as a cell surface marker, and is useful for identifying genetically modified cells, especially immunoselection of transduced mammalian cells, and for identifying mammalian cells expressing a protein of interest. The genetically modified marked cells may be used in an autologous or allogeneic setting e.g. gene therapy for bone marrow transplants, graft facilitation or immune reconstitution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Identifying genetically modified mammalian cells for use in e.g marrow transplants, comprises use of mutated protein-tyrosine

Deletions in the EGPR gene are found in many gliomas. breast tumours and lung tumours. The mei is useful for diagnosing gliomas, breast tumours and lung tumours present sequence encodes a normal EGPR polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence

                                     This invention describes a novel purified nucleic acid (I) (v-erbB related gene) specifically hybridizing to all or part of a MACI17 gene and not hybridizing to nucleic acid encoding an epidermal growth factor receptor. The product of the invention has anticancer and cytostatic activity. Antibodies to the protein encoded by (I) are conjugated to toxins and kill cancer cells expressing (I). Antibodies to the protein encoded by (I) are useful for the treatment of cancer. Fragments of (I) and the MACI17 gene are useful as probes for the detection of human mammary carcinoma or other malignancies resulting from the v-erbB related gene. This sequence encodes a human epidermal growth factor (EGF)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; v-erbB; MAC117; epidermal growth factor receptor; anticancer; cytoStatic; toxin; cancer; treatment; detection; mammary carcinoma; malignant; EGF receptor; ss.

The protein binds ligands of the EGF receptor without transmitting a signal for the growth and reproduction of a cell. It can be used as an adsorptive agent for any moletles that bind the EGF receptor as the portal of entry to a cell. It competes with the EGF creceptor present on the cell surface for the binding of ligands and thereby inhibits the action of the ligands or prevents the entry of viruses into cells. It can also be used as for the EGF receptor itself, cells in the detection of abnormalities in mammalian cell growth. It is also useful for preps novel receptors for efficient detection of ligands and their anti-ayonists or agonists. The features table indicates the discrepancies between the LDDDD3 protein sequence given in the specification and that which the pRLDDDD3 DNA sequence given the content of the precipitation would encode.
                                                                                                                                                                                                                                                                                                                                 ery Match

The sequence is that of the pRLD2D3D4 construct which encodes the epidermal growth factor (EGF) receptor truncate protein in 102D3D4 having EGF binding sites. The protein binds ligands of the EGF receptor without transmitting a signal for the growth and reproduction of a cell. It can be used as an adsorptive agent for any moleties that bind the EGF receptor as the portal of entry to a cell. It competes with the EGF receptor present on the cell surface for the binding of ligands and thereby inhibits the action of the ligands or prevents the entry of viruses into cells. It can also be used as for the EGF receptor itself, such as in the detection of abnormalities in mammalian cell growth.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Epidermal growth factor receptor truncate protein; EGF; binding sites; adsorptive agents; mammalian cell growth abnormality; detection; growth; reproduction; signal transmission; ds.

The features table indicates the discrepancies between the LDZD3D4 protein sequence given in the specification and that which the pRLDZD3D4 DNA sequence given in the specification would encode.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This cDNA encodes a novel human epidermal growth factor receptor-like protein termed TEGFR, TEGFR is derived from human placenta. Fragments of the TEGFR cDNA can be used as a probe in a hybridisation assay to detect full length of TEGFR. An antibody can be produced using the antigen comprising at least the unique C-terminal sequence of the TEGFR polypeptide, optionally conjugated to an immunogenic carrier. The antibody can be used in an immunoassay to detect the polypeptide. The hybridisation assay and immunoassay can be used in the diagnosts of human cancers. Antibodies and other inhibitors of the TEGFR polypeptide may also be used to treat hyperproliferative diseases including cancer.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This DNA encodes an epidermal growth factor (EGF) receptor related protein (ERRP). The ERRP is highly homologous to the mouse EGFR and a truncated rat EGFR. The ERRP can be expressed by standard recombinant methodology. The ERRP acts as a EGFR receptor modulator. The ERRP acts when transfected into colon cancer cell line is useful for inhibiting proliferation of the cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel epidermal growth factor receptor related protein and polynucleotide useful for inhibiting proliferation of cancer cell line

The sequence is that of the pRLD3D4 construct which encodes the epidermal growth factor (EGF) receptor truncate protein LD3D4 having EGF binding sites. The protein binds ligands of the EGF receptor without transmitting a signal for the growth and reproduction of a cell. It can be used as an adsorptive agent for any moletles that bind the EGF receptor as the portal of entry to a cell. It competes with the EGF receptor present on the cell surface for the binding of ligands and thereby inhibits the action of the ligands or prevents the entry of viruses into cells. It can also be used as for the EGF receptor itself, such as in the detection of abnormalities in mammalian cell growth. It is also useful for preps, novel receptors for efficient detection of ligands and their anti-agonists or agonists. The features table indicate a discrepancy between the LD3D4 protein sequence given in the specification and that which the pRLD3D4 DNA sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              oligonucleotides are useful for inhibiting the expression of inducible nitric oxide synthase in cells or tissues. In particular, the antisense oligonucleotides are useful for treating diseases or disorders associated with inducible nitric oxide synthase, e.g. diabetes, immunological disorder, cardiovascular disorder, neurological disorder or ischaemia/reperfusion injury. The antisense oligonucleotides are also useful for research and diagnostics. The present sequence is that of human inducible nitric oxide synthase (GenBank accession number 107868).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to antisense compounds, especially oligonucleotides, which are targeted to a nucleic acid encoding inducible nitric oxide synthase and which specifically hybridise to and modulate expression of inducible nitric oxide synthase. The antisense compounds have immunomodulator, antidiabetic, cardiovascular, cardiant, have immunomodulator, antidiabetic cardiovascular, cardiant, neuroprotective, disorder and vasotropic activity. The antisense
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       useful for treating e.g. immunological, cardiovascular or neurological disorders, or ischaemia \,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       It was obtd. by assembly of cDNA clones that had been obtd. from human breast MDA-M8-453 and human heart cell libraries by PCR mapplification using primers (see AAT18536-42) based on conserved exons from kinase domains of HER2, HER3, EGFR and Xmrk. Related sequences (see AAT18533 and AAT18535) were isolated from the MDA-MB-453 library. HER4 polynucleotides can be used in the prepn. of HER4 expression vectors, primers and probes to detect and/or clone HER4, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim 1; Page 111-116; 203pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        DNA encoding receptor tyrosine kinase, HER4 - related to human epidermal growth factor receptor, used for diagnosis and therapy of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Culouscou J, Hellstrom I,

It codes for an HER4 (AAR91734) that lacks the C-terminal autophosphorylation domain of prototype HER4 (AAR91733). A second alternative HER4 (AAR18534) sequence was also isolated. HER4 polynucleotides can be used in the prepn. of HER4 expression vectors, primers and probes to detect and/or clone HER4, and diagnostic reagents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     DNA encoding receptor tyrosine kinase, HER4 - related to human epidermal growth factor receptor, used for diagnosis and therapy of

In a method for greater success in early identification and treatment of breast cancer, the initation step for Erb-B2 gene activity is identified. This method involves determining the presence of HPBF in a biopsy from the subject, where the presence of HPBF (relative to its absence in a normal control) indicates the presence of cancer and a decreased chance of long-term survival. Binding of HPBF to the promoter can be inhibited using antisense oligonucleotides or a non-genomic nucleic acid that binds to HPBF; these oligos can be represented to the presence of the pr
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The Erb-B2 gene is one of the primary genes responsible for the transition of normal breast epithelial cells towards carcinoma in situ and the subsequent development of invasive and metastatic cancer. HPBF (see AAR77093-94), the Erb-B2 promoter binding protections of the property of the primary genes responsible for the prim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New purified protein binding to the ERBB2 gene promoter - to cell proliferation, diagnostic of breast cancer, also related antibodies, nucleic acid, assays and methods for screening

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1 number of hits satisfying chosen parameters:
                                 Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gapop 10.0 , Gapext 1.0

[5] GAGACAGGACCGCCCCAACTCGATTTTTTTTTTTTTTTT	URL:http://genome.gsc.riken.go.jp/, Tel:81-45-503-9222, Fax:81-45-503-9216) COMMENT Please visit our web site (http://genome.gsc.riken.go.jp/) for further details. CDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Science Laboratory in RIKEN. Division of Experimental Animal Research in Riken contributed to prepare mouse fissues. First strand CDNA was primed with a primer	Okido,T., Owa.C., Saito,H., Saito,R., Sakai,C., Sakai,K., Sano,H., Sasaki,D., Shibata,K., Shibata,Y., Shinaqawa,A., Shiraki,T., Sogabe,Y., Suzuki,H., Tagami,M., Tagawa,A., Takahashi,F., Tanaka,T., Tejima,Y., Toya,T., Yamamura,T., Yasunishi,A., Yoshida,K., Yoshino,M., Muramatsu,M. and Hayashizaki,Y. TITLE Direct Submission Direct Submission Submitted (10-JUL-2000) Yoshihide Hayashizaki, The Institute of Physical and Chemical Research (RIKEN), Laboratory for Genome Physical and Chemical Research Group, RIKEN Gemomic Sciences Center (GSC), RIKEN Yokohama Institute; 1-7-22 Suehiro-cho, Tsurumi-ku, Yokohama, Kanaqawa 230-0045, Japan (E-mail:genome-rse@sc.riken.go.jp,	TITLE Functional annotation of a full-length mouse cDNA collection JOURNAL Nature 409, 685-690 (2001) REFERENCE 5 (bases 1 to 2662) AUTHORS Adachi, J., Alzawa, K., Akahira, S., Akimura, T., Aono, H., Arai, A., Arakawa, T., Carninci, P., Fukuda, S., Fukunishi, Y., Furuno, M., Hanagaki, T., Hara, A., Hayateu, N., Hiramoto, K., Hiracka, T., Hori, F., Imotani, K., Ishii, Y., Itoh, M., Izawa, M., Kato, H., Kawai, J., Koja, S., Kurihara, C., Matsuyama, T., Mivazaki, A., Nishi, K., Nomura, K., Numazaki, R., Ohno, M., Okazaki, Y., Mivazaki, A., Nishi, K., Nomura, K., Numazaki, R., Ohno, M., Okazaki, Y.,	Fujiwake, S., Inoue, K., Togawa, Y., Izawa, M., Ohara, E., Watahiki, M., Yoneda, Y., Ishikawa, T., Ozawa, K., Tanaka, T., Matsuura, S., Kawai, J., Okazaki, Y., Muramatsu, M., Inoue, Y., Kira, A. and Hayashizaki, Y.
